

Maths Mastery

Online Prospectus

	Short test to find areas that need the most improvement. The short test will comprise of core principles in mathematics (fractions, percentages, compound area, trigonometry etc)
	Begin teaching topics starting from most important principles, building knowledge upwards. Constant exposure to exam questions to prepare student mentally for real exams.
	Once enough core topics have been completed, students are taught how to effectively study mathematics independently – they will learn exam technique and how to self-mark questions according to examiner mark schemes.
	Students are now able to complete past exam papers and mark it themselves. The student has achieved academic independence – they can study by themselves very effectively with the best method – practice, practice, practice!
